

Abstract

An electronic device having a first surface positioned adjacent to an article worn
by a person and a second surface substantially perpendicular to the first surface, the
electronic device having a headphone connector interface for accepting a headphone
connector, the electronic device comprising a clip coupled with the electronic device, the
clip having a first segment positioned adjacent to the first surface and a second segment
configured at a predetermined angle with respect to the first segment, wherein pressing
the second segment toward the second surface rotates the first segment away from the
first surface; the clip further comprising an adapter coupled with the first segment of the
clip, the adapter positioned between the first segment of the clip and the first surface of
the object and having an adapter length.
